

MSO Reverse

System intelligence platform that transforms legacy systems into AI ready **knowledge infrastructure**.

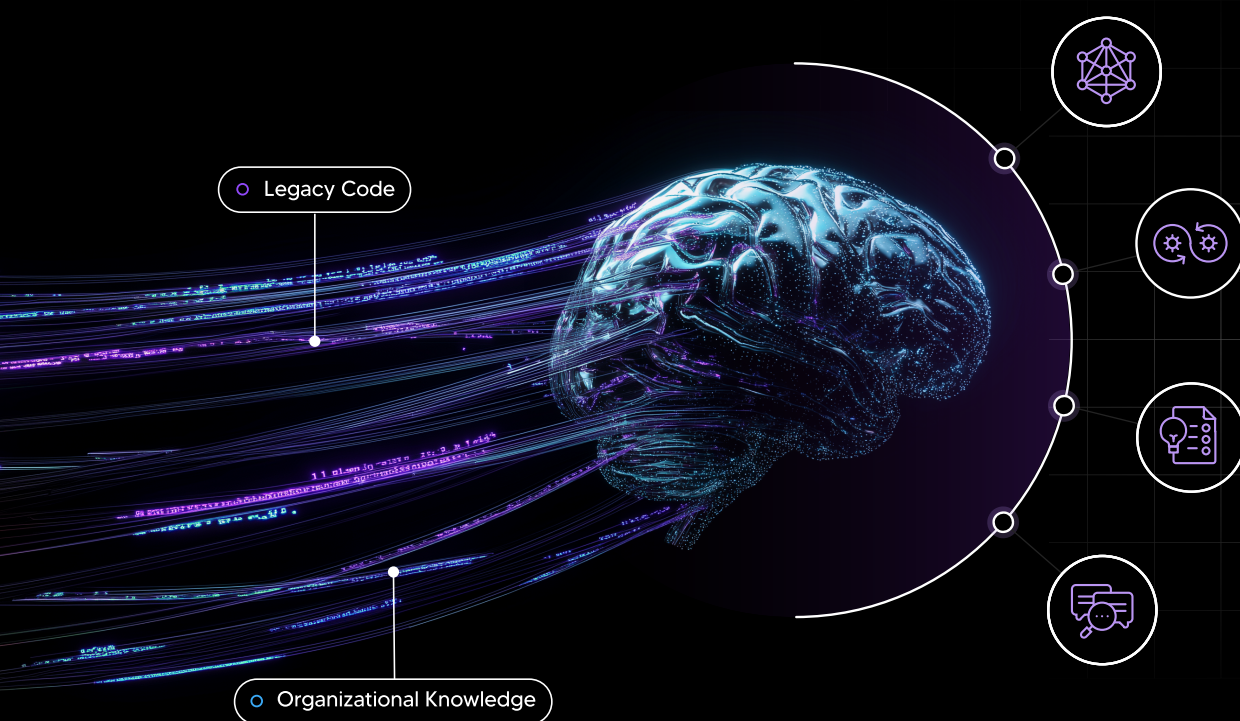

Decode the past and control the future.

It's Not a Code Problem. It's a Knowledge Crisis.

Knowledge is the only thing standing between control and chaos – and it's walking out the door

Without the knowledge you keep losing, maintenance becomes guesswork, modernization fails, and AI Agents have nothing meaningful to work with. MSO Reverse will turn this crisis into advantage.

Turn Complex Systems Into Living Knowledge.

Characterization Generation

Generate multiple document types including business workflow, rules catalog, technical specifications, and stakeholder reports for **any part of your system**

Conversational Discovery

Ask anything about your systems in plain language – An always-available research partner, integrated to live knowledge infrastructure, for building deep understanding, **fast**.

Task-Specific AI Agents

From understanding to action – Each agent operates on full system context to deliver **results you can trust**.

Continuous Asset Intelligence

Continuous sync keeps your knowledge base current with every assets or code change – so decisions are always **based on today's reality**, not yesterday's snapshot.

Why MSO Reverse?

01 Stop Knowledge Drain

Recreate and capture institutional knowledge through AI-powered analysis before it walks out the door.

02 Deep Insights for Every Stakeholder

MSO Reverse delivers tailored intelligence to architects, business leaders, and developers—from technical debt analysis to business impact assessments.

03 Remove the Urgency

Gain a deep understanding of every component and business rule in your systems, to better control the future changes and confidently control your potential transformation journey.

04 Clarity at Scale

Uncover hidden logic and workflows across millions of lines of code.

05 Open Platform, No Lock-In

Deliver value through fully automated processes while maintaining an open approach – enabling your teams, partners, and any AI tool to build on a shared knowledge foundation

06 Enterprise-Proven Methodology

Our methodology-driven approach processes millions of LOC with precision, transforming decades-old systems into comprehensible, actionable intelligence across any industry or architecture.

07 Security First

All data stays with you, secure and protected.

Support for What You Need

Technologies Supported

COBOL, RPG, JCL, PL/I, DB2, Natural & Adabas, and more

Deployment Options

Public cloud, customer cloud, or on-premise environments

Turn your legacy systems into strategic assets with **MSO Reverse**.
